This 3D-printed enclosure is specifically designed for the **Arduino GIGA R1 WiFi** board together with the official **GIGA Display Shield**. It consists of a top and bottom shell that are securely fastened using four M3 x 25 mm screws and four M3 nuts.

A key design feature is the **shadow gap** between the upper and lower halves. This not only gives the case a clean, modern look but also helps to **compensate for 3D printing tolerances**, resulting in a better fit.

Two versions of the bottom part are included:

A **closed version** for a clean appearance and maximum protection

An **open version** with a cutout for full access to the **Arduino GIGA R1 I/O pins** – perfect for prototyping and development

The case was printed successfully using **PLA** and fits tightly and securely. It's ideal for makers and developers who want a clean and functional housing for their GIGA-based projects.
